

## AMENDMENTS

### In the Claims

Claim 61 is amended.

Please cancel claims 59, 60 and 63-67 without prejudice

Claims 69-84 were previously cancelled without prejudice.

Claims 1-58, 61 and 62 are allowed and are listed below as follows:

1. (Previously Presented) A method of providing information to a computer user comprising:

displaying, in a navigable window of a display area of a user interface, a first contextual display associated with a first context that can enable a user to accomplish one or more tasks, said displaying being accomplished using a single application program that is configured to provide multiple different contexts; and

without changing the first context and using the single application program, presenting quick links to one or more contexts that are different from the user's current context and that are provided by the single application program, each context being associated with a functionality that can enable the user to accomplish various tasks that are different from the one or more tasks that the user can accomplish using the first contextual display, the quick links being selectable to navigate the navigable window to a context associated with a selectable quick link.

2. (Original) The method of claim 1, wherein each functionality comprises a document-centric functionality.

1  
2 3. (Original) The method of claim 1, wherein each of the  
3 functionalities is different.

4  
5 4. (Original) The method of claim 1 further comprising displaying  
6 user-engagable indicia, each of which being associated with one or more quick  
7 links, said indicia being configured for engagement by a user so that the user can  
8 view the associated one or more quick links.

9  
10 5. (Previously Presented) The method of claim 1, wherein said  
11 displaying is accomplished by the single application program using a navigable  
12 window comprising a single window, the application program being configured to  
13 navigate the single window between different contexts responsive to the user  
14 selecting a quick link.

15  
16 6. (Original) The method of claim 1 further comprising prior to said  
17 presenting, automatically determining at least some of the quick links based, at  
18 least in part, on a user's behavior within the single application program.

19  
20 7. (Original) The method of claim 1 further comprising prior to said  
21 presenting, automatically determining at least some of the quick links based, at  
22 least in part, on a user's history within the single application program.

1           8.     (Original) The method of claim 1, wherein the single application  
2 program is configured with navigation instrumentalities that enable a user to  
3 navigate back and forth between the multiple different contexts.

4  
5           9.     (Original) The method of claim 8, wherein the single application  
6 program is configured with a navigation model to manage navigation activities of  
7 the user, the navigation model comprising a navigation stack.

8  
9           10.    (Original) The method of claim 1 further comprising:  
10       presenting the user with a choice of multiple different algorithms, each  
11       algorithm being configured to provide a different collection of quick links; and  
12       said presenting of the quick links being performed responsive to a user  
13       selecting one of the multiple different algorithms.

14  
15           11.    (Original) The method of claim 10, wherein one of the multiple  
16       different algorithms comprises an algorithm that presents quick links on a  
17       favorites list based on items visited most often by a user in combination with items  
18       that have been recently added by a user to a favorites list.

19  
20           12.    (Original) The method of claim 10, wherein one of the multiple  
21       different algorithms comprises an algorithm that presents quick links based on  
22       items visited most often by a user in combination with items that have been  
23       recently visited by a user.

24  
25

1           13. (Original) The method of claim 10, wherein one of the algorithms  
2 comprises an algorithm that presents multiple quick links each of which  
3 representing a different document type that was the last item of a particular  
4 document type that was visited by a user

5  
6           14. (Original) The method of claim 10, wherein some of the algorithms  
7 are employable across multiple different content types.

8  
9           15. (Previously Presented) One or more computer-readable media  
10 having computer-readable instructions thereon which, when executed by a  
11 computer, cause the computer to:

12           provide multiple different functionalities within the confines of a single  
13 application program, the multiple different functionalities being associated with  
14 individual different document-centric tasks that can be accomplished by a user,  
15 individual document-centric tasks being associated with different document types;

16           define a single navigable window within which the different functionalities  
17 can be presented to a user so that they can accomplish a task associated with a  
18 particular functionality, the single navigable window being configured to navigate  
19 back and forth between the different functionalities;

20           define individual user-engagable indicia and associate those indicia with  
21 one or more of the multiple different functionalities, each indicia being engagable  
22 by a user to display quick links that are associated with a functionality, individual  
23 quick links being associated with a document that can enable a user to accomplish  
24 a task; and  
25

1 display one or more of the quick links associated with one functionality,  
2 while a user is engaged in a task associated with another of the functionalities,  
3 without requiring the user to change the functionality within which they are  
4 working.

5  
6 16. (Original) The computer-readable media of claim 15, wherein the  
7 instructions cause the computer to display a selection of multiple different  
8 algorithms from which a user can choose and which affect the quick links that are  
9 displayed.

10  
11 17. (Original) The computer-readable media of claim 16, wherein one  
12 of the multiple different algorithms comprises an algorithm that presents quick  
13 links on a favorites list based on items visited most often by a user in combination  
14 with items that have been recently added by a user to a favorites list.

15  
16 18. (Original) The computer-readable media of claim 16, wherein one  
17 of the multiple different algorithms comprises an algorithm that presents quick  
18 links based on items visited most often by a user in combination with items that  
19 have been recently visited by a user.

20  
21 19. (Original) The computer-readable media of claim 16, wherein one  
22 of the algorithms comprises an algorithm that presents multiple quick links each of  
23 which representing a different document type that was the last item of a particular  
24 document type that was visited by a user.

25

1           20. (Original) The computer-readable media of claim 19, wherein said  
2 algorithm that presents multiple quick links is extendable to include newly created  
3 document types.

4  
5           21. (Original) The computer-readable media of claim 16, wherein the  
6 multiple different algorithms comprise one or more of the following:

7           an algorithm that presents quick links based on items visited most often by  
8 a user in combination with items that have been recently added by a user to a  
9 favorites list;

10          an algorithm that presents quick links based on items visited most often by  
11 a user in combination with items that have been recently visited by a user; and

12          an algorithm that presents multiple quick links each of which representing a  
13 different document type that was the last item of a particular document type that  
14 was visited by a user.

15  
16          22. (Previously Presented) A method of providing information to a  
17 computer user comprising:

18          displaying a first contextual display within a navigable window display area  
19 of a user interface that enables a user to accomplish a task relating to a first  
20 content type;

21          displaying quick links associated with one or more content types that are  
22 different from the first content type; and

23          responsive to a user selecting a particular quick link, navigating the  
24 navigable window display area to a content type that is associated with the  
25 selected quick link to enable a user to accomplish a different task.

1  
2 23. (Original) The method of claim 22, wherein all of the content types  
3 are provided by a single application program.

4  
5 24. (Previously Presented) The method of claim 22, wherein all of the  
6 content types are provided by a single application program and are displayable  
7 within a navigable window display area comprising a single navigable window  
8 that can be navigated between the content types.

9  
10 25. (Original) The method of claim 22 further comprising prior to  
11 displaying said quick links, building said quick links based on dynamically-  
12 changing information.

13  
14 26. (Original) The method of claim 22 further comprising prior to  
15 displaying said quick links, building said quick links based on dynamically-  
16 changing information at least some of which is not related to any actions that the  
17 user is taking.

18  
19 27. (Original) The method of claim 22, wherein said displaying of the  
20 quick links comprises doing so using at least one algorithm that can be deployed  
21 across multiple different content types.

22  
23 28. (Original) The method of claim 27, wherein one algorithm  
24 comprises an algorithm that presents quick links based on items on a favorites list  
25

1 visited most often by a user in combination with items that have been recently  
2 added by a user to a favorites list.

3  
4 29. (Original) The method of claim 27, wherein one algorithm  
5 comprises an algorithm that presents quick links based on items visited most often  
6 by a user in combination with items that have been recently visited by a user.

7  
8 30. (Original) The method of claim 27, wherein one algorithm  
9 comprises an algorithm that presents multiple quick links each of which  
10 representing a different content type that was the last item of a particular content  
11 type that was visited by a user.

12  
13 31. (Original) One or more computer-readable media having computer-  
14 readable instructions thereon which, when executed by a computer, cause the  
15 computer to:

16 display a first contextual display that enables a user to accomplish a task  
17 relating to a first content type;

18 enable a user to select from multiple different algorithms which affect quick  
19 links that are displayed and which enable a user to navigate to other contexts, the  
20 algorithms being deployable across multiple different content types and  
21 comprising one or more of the following:

22 an algorithm that presents quick links based on items on a favorites  
23 list visited most often by a user in combination with items that have been recently  
24 added by a user to a favorites list;

25

1 an algorithm that presents quick links based on items visited most  
2 often by a user in combination with items that have been recently visited by a user;  
3 and

4 an algorithm that can present multiple quick links each of which  
5 representing a different content type that was the last item of a particular content  
6 type that was visited by a user;

7 display quick links associated with one or more content types that are  
8 different from the first content type, the quick links being displayed responsive to  
9 the user selecting a particular algorithm, all of the content types being provided by  
10 a single application program that provides a single navigable window that can be  
11 navigated between all of the content types; and

12 responsive to a user selecting a particular quick link, navigate to a content  
13 type that is associated with the selected quick link to enable a user to accomplish a  
14 different task.

15  
16 32. (Previously Presented) A method of providing information to a  
17 computer user comprising:

18 receiving information that pertains to multiple different user contexts  
19 within an application program;

20 presenting a display comprising a navigable window to a user, the display  
21 pertaining to a first user context within the application program, the first user  
22 context permitting the user to accomplish tasks pertaining to a first content type;  
23 and

24 displaying at least one quick link that is associated with a context that is  
25 different from the first user context, the displayed quick link being associated with

1 said information and being associated with a different content type, the quick link  
2 being selectable to navigate the navigable window to the different context.

3  
4 33. (Original) The method of claim 32, wherein the multiple different  
5 user contexts are each associated with a different content type.

6  
7 34. (Original) The method of claim 32, wherein said displaying of said  
8 at least one quick link comprises displaying multiple quick links, at least some of  
9 the quick links being associated with contexts that are each associated with a  
10 different content type.

11  
12 35. (Original) The method of claim 32, wherein said displaying  
13 comprises displaying the at least one quick link in a drop down menu.

14  
15 36. (Original) The method of claim 32, wherein said displaying  
16 comprises doing so without changing content of the display that pertains to the  
17 first user context.

18  
19 37. (Original) The method of claim 32, wherein said information  
20 comprises information that is generated by the user.

21  
22 38. (Original) The method of claim 32, wherein said information  
23 comprises information that is not generated by the user.  
24  
25

1           39. (Original) The method of claim 32, wherein said information  
2 comprises information that can dynamically change.

3  
4           40. (Original) The method of claim 32, wherein said receiving  
5 comprises receiving said information while the user is working within the first  
6 user context.

7  
8           41. (Previously Presented) The method of claim 32 further comprising:  
9 receiving user input that selects a displayed quick link; and  
10 presenting a display by navigating the navigable window to the user  
11 pertaining to a context that is associated with the selected quick link.

12  
13           42. (Previously Presented) One or more computers programmed with  
14 instructions that cause the computers, when executing the instructions, to:

15           execute an application that is configured to provide multiple different  
16 functionalities that can enable a user to accomplish multiple different tasks,  
17 individual functionalities being associated with different document types;

18           enable the user to accomplish, within a navigable window, a task within  
19 one of the functionalities and, while doing so, display one or more quick links that  
20 are associated with other different functionalities, individual quick links being  
21 engagable by the user to navigate the navigable window to a document type that is  
22 associated with that quick link;

23           navigate the user, via the navigable window, to a item from a particular  
24 document type when the user engages a quick link associated with that document  
25 type.

1  
2 43. (Original) A computing system comprising:  
3 a single application program configured to provide:  
4 a single navigable window;  
5 multiple different functionalities to which the single navigable window can  
6 be navigated by a user; and

7 multiple quick links that are associated with one or more of the multiple  
8 different functionalities, individual quick links being displayable and engagable by  
9 a user to navigate the single navigable window to the functionalities that are  
10 associated with a quick link.

11  
12 44. (Original) The computing system of claim 43, wherein at least some  
13 of the different functionalities are associated with different content types.

14  
15 45. (Original) The computing system of claim 43, wherein the single  
16 application program is configured to provide multiple different algorithms that are  
17 selectable by the user to automatically change quick links that are displayed for  
18 them.

19  
20 46. (Original) The computing system of claim 45, wherein at least some  
21 of the different algorithms can display links to different content types.

22  
23 47. (Original) The computing system of claim 45, wherein at least some  
24 of the different algorithms are configured for use across different content types.  
25

1           48. (Original) The computing system of claim 47, wherein one of the  
2 algorithms comprises an algorithm that presents quick links based on items on a  
3 favorites list visited most often by a user in combination with items that have been  
4 recently added by a user to a favorites list.

5  
6           49. (Original) The computing system of claim 47, wherein one of the  
7 algorithms comprises an algorithm that presents quick links based on items visited  
8 most often by a user in combination with items that have been recently visited by a  
9 user.

10  
11           50. (Original) The computing system of claim 47, wherein one of the  
12 algorithms comprises an algorithm that can present multiple quick links each of  
13 which representing a different content type that was the last item of a particular  
14 content type that was visited by a user.

15  
16           51. (Original) The computing system of claim 43, wherein the single  
17 application program is configured to provide a navigation model that manages the  
18 user's navigation activities within the single application program.

19  
20           52. (Original) The computing system of claim 51, wherein the  
21 navigation model comprises a back-and-truncate stack.

22  
23           53. (Previously Presented) Software code embodied on a computer-  
24 readable medium which, when executed by a computer, provides a user interface  
25 (UI) comprising:

1 a single window that is capable of being navigated to and between multiple  
2 different functionalities that enable a user to accomplish multiple tasks in  
3 connection with a single application that provides the multiple different  
4 functionalities;

5 links associated with the different functionalities and configured to enable  
6 the user to navigate the single window to and between the multiple different  
7 functionalities; and

8 user-engagable indicia associated with one or more of the links, the user-  
9 engagable indicia being engagable by a user to display quick links that are  
10 associated with a particular functionality, the quick links being engagable by the  
11 user to automatically navigate the single window to a functionality with which the  
12 quick link is associated, said software code being configured to enable a user to  
13 navigate backward and forward, in a browser-like fashion, between the different  
14 functionalities.

15  
16 54. (Original) The software code of claim 53, wherein the UI further  
17 comprises at least one command area that is configured to present context-  
18 sensitive commands that automatically change as the user's context changes when  
19 they navigate to and between the multiple different functionalities.

20  
21 55. (Original) The software code of claim 54, wherein said at least one  
22 command area is configured to display a context block that contains multiple  
23 algorithms from which a user can select to vary a list of quick links that are  
24 displayed for the user.  
25

1           56. (Original) The software code of claim 55, wherein at least some of  
2 the algorithms are employable with different content types.

3  
4           57. (Original) The software code of claim 53, wherein the UI further  
5 comprises browser-like navigation buttons that are engagable by the user for  
6 navigating to and between the multiple different functionalities.

7  
8           58. (Original) A computer embodying the computer-readable medium  
9 of claim 53.

10  
11           59.- 60. (Canceled).

12  
13           61. (Currently Amended) ~~The method of claim 59;~~ A method of  
14 displaying quick links to user information comprising:

15           displaying multiple different algorithms from which a user can select, the  
16 algorithms being configured to display quick links to which a user can navigate,  
17 individual algorithms being employable across different content types;

18           receiving a user selection of an individual algorithm; and  
19 responsive to receiving the user selection, displaying one or more quick  
20 links that are provided by the selected algorithm, wherein said acts of displaying  
21 the multiple different algorithms, receiving the user selection, and displaying the  
22 one or more quick links are performed by a single application program that is  
23 configured to provide multiple different functionalities that can enable a user to  
24 accomplish multiple different tasks, individual quick links being associated with  
25 individual functionalities.

1  
2 62. (Original) The method of claim 61, wherein the single application  
3 program is configured to provide a single navigable window that can be navigated  
4 to and between the multiple different functionalities.

5  
6 63.-67. (Canceled)

7  
8 68. One or more computer-readable media having computer-readable  
9 instructions thereon which, when executed by a computer, cause the computer to:

10 display multiple different algorithms from which a user can select, the  
11 algorithms being configured to display quick links to which a user can navigate,  
12 individual algorithms being employable across different content types and  
13 comprising one or more of the following:

14 a top favorites algorithm that enables the user to view quick links  
15 associated with items that have been visited most often by the user as well as items  
16 that have been most recently added to a user's favorites list;

17 a suggested favorites algorithm that enables the user to view quick links  
18 associated with items that have been visited most often by the user as well as items  
19 that have been most recently visited by the user; and

20 a recent items list that is configured to display multiple items, each of  
21 which comprising a different content type that was the last item of a particular  
22 content type that was visited by a user;

23 receive a user selection of an individual algorithm; and

24 responsive to receiving the user selection, display one or more quick links  
25 that are provided by the selected algorithm.
